

BOP Transitional Drug Abuse Treatment (TDAT)

TDAT is the final component of the Bureau's residential drug abuse treatment program ([RDAP](#)), which is available at select Bureau institutions. For an inmate to successfully complete all RDAP components, he or she must be transferred to a community corrections center (CCC) and continue to participate in TDAT, in addition to completing the required employment and other CCC activities. Inmates participate in TDAT the entire time they are at the CCC or on home confinement.

Target Population

TDAT is appropriate for the following groups:

- inmates who have completed the institution portion of the Bureau's RDAP, and
- inmates who did not have an opportunity to participate in the RDAP.

Eligibility Criteria

RDAP participants have already met the eligibility requirements listed below and are automatically enrolled in TDAT. To participate in TDAT, all other inmates must:

- have a verifiable documented drug abuse problem.
- meet the diagnostic criteria for substance abuse or dependency indicated in the DSM. (There must also be verification in the presentence investigation (PSI) report or other similar documents supporting the diagnosis.)
- sign an agreement acknowledging his or her program responsibility.
- have at least 90 days in a CCC or home confinement.

Services Available

TDAT participants are referred for one or more of the following services: an assessment and/or mental health intake assessment; individual, group, family, marital, mental health, and/or intensive outpatient counseling; and/or medication monitoring. Ordinarily, participants may receive up to four hours of counseling per week.

TDAT Completion

Once Bureau staff and the contract treatment provider have deemed the inmate has completed all appropriate treatment, they are considered TDAT complete. Non-violent inmates who complete RDAP, including TDAT, may receive up to one year off their sentence.
